Recommendation Letter

I am pleased to recommend Mr. Likhith Rudresh, whom I had the opportunity to supervise during his Master's Thesis at Chalmers University of Technology in collaboration with RISE Fire Research, during spring of 2026.

Likhith demonstrated a rare combination of strong analytical skills, technical competence, and professional maturity, during the course of his thesis work,. He worked on a highly interdisciplinary research project involving machine learning, computer vision, physics-informed modelling, and fire safety engineering. The project required not only advanced programming and data analysis skills, but also the ability to understand complex physical phenomena and translate them into robust computational solutions.

Likhith is a fast learner who quickly became proficient in several advanced tools and methodologies. Throughout the project, he consistently showed initiative, intellectual curiosity, and a willingness to critically evaluate his own work. Rather than accepting results at face value, he actively investigated unexpected findings, identified underlying causes, and contributed to improving the quality and reliability of the research outcomes. He demonstrated strong capabilities in advanced technical concepts such as machine learning model development, data processing, and experimental data analysis. Equally important, he was able to communicate complex technical concepts clearly and effectively, both in written reports and oral presentations.

Beyond his technical abilities, Likhith is a highly dependable and collaborative individual. He worked constructively with supervisors and colleagues, welcomed feedback, and maintained a professional attitude throughout the project. His commitment to excellence, attention to detail, and positive approach made him a valued member of the team.

Based on my experience working with him, I am confident that Likhith will be a strong asset to any organization, research group, or internship program. I recommend him without reservation for early-career roles in manufacturing, operations, process development, or industrial engineering. He combines analytical capability with a practical, structured approach to complex problems, and he works carefully to understand the causes behind unexpected results. I believe he would be well suited to organisations seeking to improve process reliability, efficiency, and operational performance.

Please feel free to contact me if further information is required.

Yours sincerely,

RISE Research Institutes of Sweden AB
