SUMMARY

Quality and process engineering professional specializing in **Six Sigma DMAIC**, **FMEA-based risk analysis**, and 8D root-cause investigation within regulated manufacturing environments. **Six Sigma Black Belt** with proficiency in **value stream mapping**, RPN-based failure-mode prioritization, and APQP/PPAP documentation, skilled at creating continuous-improvement strategies and governance frameworks that translate **cross-functional** process redesigns into standardized, audit-ready **SOPs**. Bringing that same technical rigor, data-driven decision-making, and strategic process-improvement discipline to roles in quality, process, and manufacturing engineering.

EXPERIENCE

RISE Research Institutes of Sweden, Gothenburg

Jan 2026 - Jul 2026

Student Researcher (Master Thesis)

- **Cross-functional** engineering stakeholders needed a staged path from open requirements to a firm process recommendation; structured a 3-phase, 6-month applied research programme across 5 **Stage-Gate milestones** (**requirements specification**, **technology evaluation**, **process recommendations**), giving stakeholders a clear, decision-ready output at each stage
- 6 identified failure modes left corrective-action priorities unclear; produced **FMEA-based risk analysis** (**RPN-ranked**), translating findings into prioritised actions that resulted in a **continuous improvement** governance framework adopted by engineering teams

Cepheid AB, Stockholm, Sweden

Jan 2025 - Aug 2025

Six Sigma DMAIC Lean Process Development, Student Intern

- A regulated manufacturing line was running an extended 20.5-week **lead time**; applied structured **DMAIC problem-solving** (**VSM**, **cycle time analysis**, **waste elimination**, **OEE monitoring**), reducing **lead time** 56% to 9 weeks
- The redesigned process needed formal sign-off before going live on the regulated line; ran 8D-based root-cause validation and an APQP-aligned, PPAP-style checklist, securing sign-off before the new **SOPs** rolled out
- The **cross-functional** team lacked a shared Lean toolkit and standard **KPI** visibility; trained and coached the team on **Lean tools** and built **KPI dashboards** and **SOPs** in Power BI/Excel, reducing team workload 67% and standardising the process across the network

Thermax Limited KEP, Bengaluru, India

Feb 2024 - Apr 2024

Manufacturing Quality and Process Intern

- Shop-floor capability gaps were driving process waste; ran **root-cause analysis** and **production flow mapping** and coordinated the resulting **corrective actions** with manufacturing teams per **ISO 9001/EHS**
- **Manufacturing KPIs**, **capacity utilisation**, and **delivery performance** lacked visibility against quality and customer requirements; built performance **dashboards** to document lessons learned and track them, with the resulting **process recommendations** adopted directly by management

AWARDS

No. 1 in Lean Development Game (ranked 1st of 40+ participants)
QOM, Chalmers University of Technology · Nov 2024

VOLUNTEERING

Phadder Manager (Volunteer)

CIRC, Chalmers University of Technology

Nov 2024 - Dec 2025

- Coordinated **cross-functional** volunteer teams to onboard 1,000+ international students; planned and executed large-scale logistics across 10+ parallel workstreams, documenting lessons learned and influencing change through structure and clear communication

KEY ACHIEVEMENTS

56% Lead Time Reduction
A regulated Cepheid AB manufacturing line's 20.5-week lead time was limiting throughput; Six Sigma DMAIC tools (VSM, cycle time analysis, OEE monitoring) brought it down to 9 weeks.

67% Team Workload Reduction
Replaced ad hoc process knowledge with standardised SOPs and KPI dashboards, cutting the team's manual workload by a separate 67% and making the gains repeatable across the network.

FMEA Governance Framework Adopted
Turned 6 RPN-ranked failure modes into a prioritised action plan at RISE; engineering teams adopted the resulting framework as their standard way to triage recurring quality risks.

APQP/PPAP-Style Sign-Off Secured
8D-based root-cause validation gave stakeholders the documented evidence needed to approve a redesigned process on a regulated line before new SOPs went live.

SKILLS

Product Quality · Technical Problem-Solving · Customer Deviation Handling · Quality Issue Investigation · Cross-Functional Collaboration

ANALYTICAL PROBLEM-SOLVING
Six Sigma DMAIC · Value Stream Mapping (VSM) · Root Cause Analysis · FMEA · Statistical Analysis · Data-driven Decision Making

CONTINUOUS IMPROVEMENT
Lean Tools · OEE Monitoring · Cycle Time Analysis · Waste Elimination · Continuous Improvement Governance · Process Standardisation

DATA AND TOOLS
Python · Excel (advanced) · Power BI · SAP ERP · JMP · CAD (Siemens NX · Solid Edge) · MS Office

EDUCATION

MSc, Quality and Operations Management
Chalmers University of Technology, Sweden
Aug 2024 - Aug 2026
Courses: Quality Engineering, Lean Production, Statistical Methods

BEng, Mechanical Engineering
Global Academy of Technology, India
Jan 2020 - Jun 2024
Courses: Total Quality Management, Manufacturing Processes, Project & Operations Management
